**Climate Change and Crop Pattern Repo**

**Report (2022-23)**

An Interdisciplinary Guest Lecture on 'Climate Change and Cropping Pattern' was organized by the Department of Economics on 17 January 2023. Dr. A. D. Pawar, subject expert and research guide of the college's geography department, was the keynote speaker. The program was presided over by N. D. Pagar, Senior Professor, Department of Political Science, of the College. Dr. M. V. Hiray, Senior Professor, Department of Economics, introduced the keynote speakers. And Dr. B. M. Sonawane, HOD of Economics explained the purpose of organizing the lecture in the introduction.

Dr. A. D. Pawar in his lecture explained the information in a scientific manner regarding the geographical location, seasonal cycle and cropping system of India. As India falls in the temperate zone, there are mainly three seasons in India. Farmers produce different crops during Kharif and Rabi seasons. When farmers were farming in traditional way, traditional crops were cultivated in large scale. Certain crops were cultivated in an environment conducive to the crops.

This makes certain regions famous for the production of certain crops. E.g., Nagpur's oranges, Nashik's grapes, Jalgaon's bananas and the production of cereal crops in North India, etc., but in the last three decades, a large amount of trees were felled in the name of industrialization and due to the increase in the speed of industrialization, air, water and noise pollution were created in a large amount. The emission of chemical elements started increasing. Dr. A. D. Pawar explained in his lecture that this resulted in increase in temperature and due to this there are drastic changes in the cropping system as well.

Dr. D. N. Sonawane, Dr. S. P. Deore, Dr. R. K. Jadhav and 46 students of the Department of Economics were present for the lecture. Samadhan Gumade, a postgraduate student of the Department of Economics expressed his thanks.
